

MAZZONETTO METALLI

- MAZZONETTO METALS

Mazzonetto was founded in 1982 by the Mazzonetto family in Veneto, in the North of Italy, near Venice. Ever since its inception the company has distinguished itself for its manufacturing efficiency and innovative core.

Since Mazzonetto came into being 30 years ago, it has set the bar high for other manufacturers. Today Mazzonetto is a well-established group with branches in Europe and an always expanding international presence.

Since the '90s Mazzonetto has extended its product offering to include metal cladding for building roofs and façades and has created a series of exclusive finishes and special cladding systems specifically designed for the architecture and the construction industry.

Specialisation in metalwork and unwavering attention to market developments are the two main factors driving this ongoing growth process.

Mazzonetto's product range is backed by a comprehensive design service. From design to installation all Mazzonetto branches and distributors have access to technical-assistance centres, manned by experts who are able to understand the project requirements and provide installers, fabricators, and designers with advice and tips.

Today, Mazzonetto offers a range of metal-coating products which satisfy design creativity, installer requirements, and the customer desires for distinctive and functional materials.

The wide range of finishes and textures available make it easy to preserve and enhance any building's character. Our products are suitable for cladding surface areas with complex shapes.

Vestis was specifically designed to meet all cladding requirements with a mission to act as a "unique and protective living skin".

The Skin

*Quello che c'è di più profondo
nell'essere umano è la pelle.*

-
The deepest thing in man
is the skin.

Paul Valéry

"The Skin" is Mazzonetto's project dedicated to metal cladding for architectural projects.

An "epidermal layer" capable of shielding buildings from environmental agents - such as rain, sunlight and harsh temperatures - thus extending life beyond normal expectations.

Available in a wide range of alloys and finishes, Mazzonetto metals encase buildings in a protective second skin, which, according to customer requirements and desires, could change itself over time or remain unaltered (Vestis), protecting the building.

The Skin encapsulates the main features of all Mazzonetto products: the skin is a metaphor used to convey the idea of a beautiful covering through which a building's soul transpires. The distinguishing features of a project and all that is associated with it transpires from every pore of its "skin".

MAZZONETTO ACADEMY

L'accademia dei metalli

- The metal academy

Metal is versatile, long lasting, and has countless different purposes when shaped by skilled hands.

Fuelled by this belief and fired by a veritable passion for metal products, almost five years ago Mazzonetto inaugurated its Academy's first premises, dedicated to providing updates and developments on the use of metal cladding for building roofing and façades as well as rainwater goods.

Originally established with roofers in mind, today the Academy is itinerant and moves around holding mobile workshops for designers.

The Academy has developed a learning path for professionals which starts with the characteristics of each metal and the way metals act right up to the various ways they can be applied in design and installation.

Each metal is treated differently according to its nature. Its real potential in practical, creative and aesthetic terms is considered.

MAZZONETTO ACADEMY PRO

L'accademia dei metalli per progettisti

- The metal academy for architects

Our achievements sparked the idea of our Mazzonetto Academy Pro which came into existence in 2016. This is a section of our school dedicated to designers and organised into special mobile workshops for architects and design professionals. Its purpose is to examine individual metals, their peculiarities and their most suitable method of application.

The underlying idea is to ensure project feasibility can be achieved as during schematic design and concept phases.

Ecologico e riciclabile Ecological and recyclable	Resistente ai raggi UV UV resistant	Distanza dal mare >1km Distance by the sea <1km	Durata e resistenza garanzia fino a 40 anni Till 40 years warranty

Caracteristics			
densità density	2,70 kg/dm ³	classe di resistenza al fuoco fire resistance class	A1
resistenza alla corrosione corrosion resistance	prova in nebbia salina 1500 Ore salt spray test 1500 Hours	coefficiente di dilatazione termica thermal expansion coefficient	0,023 mm m ⁻¹ °C
resistenza ai raggi UV UV rays resistance	test 2000 Ore - RUV 4 test 2000 Hours - RUV 4		

Warranty	
Urban/Industrial (moderate pollution) Marine >3km Strong UV (mountain/high altitude) Rural non desert	40 years
Industrial (severe pollution) Marine 3km > 1km	20 years
Marine <1km	Speak with AMA

> The conditions of warranty should only be considered valid in even-tempered climatic conditions and are not valid in desert or tropical areas. For local clarification, speak with Architectural Metals Australia (AMA).

Vestis is Mazzonetto's line of pre-painted aluminium. The material is lightweight and can be used to form many different cladding profiles.

Vestis has superior performance in harsh climatic zones. It can be applied in the most hostile environments where it will resist ageing and withstand UV rays, even at high altitudes and in coastal locations.

Vestis is considered a polyester product. Traditionally polyester paint was believed to limit material flexibility and durability. Vestis differs from standard polyester coatings, as it sits within a sub-section, called **high durability polyester paint**. This specialist coating provides Vestis with a **35 micron layer** finish, instead of polyester paint's standard offering of 20-25 microns.

High durability polyester paints create improved surface performance, flexibility, and exceptional UV resistance.

> Non-stocked materials are available as special order items.
> International lead times and additional costs will apply.
> Contact Architectural Metals Australia for more information.

Vestis Collection

Stucco finish available as a special order item on all Vestis finishes.

PRESBYTERIAN LADIES COLLEGE, PERFORMING ARTS CENTRE - MELBOURNE
Vestis: Black Graphite
System: Interlocking and Standing Seam
Architect: Cox Architects

ARMSTRONG STREET RENOVATION - MELBOURNE
Vestis: Anthracite Grey
System: Interlocking

BATES STREET HOUSE - MELBOURNE
